

Are you confident your reference data is consistent, governed, and fit for enterprise scale?

Many enterprises face fragmented, duplicated, and poorly governed data - yet these datasets underpin critical processes, analytics, and AI. At the same time, legacy platforms are reaching end of life, and there is increasing pressure to deliver governed data, at scale, with speed.

The **Amplifi Reference Data Accelerator** provides a fast, governed, and repeatable approach to managing enterprise reference data - without the need for long implementations or bespoke builds. Developed through real-world delivery, the accelerator packages proven configurations, data models, and integration patterns into a ready-to-deploy solution.

The solution uses **Stibo Systems STEP** as the reference data master, providing a robust and scalable foundation.

Establish a single, governed source of reference data

Distribute trusted data consistently across the enterprise

Rapidly onboard new reference data domains with minimal effort

Amplifi's Reference Data Accelerator

If you are replacing legacy reference data platforms, struggling with inconsistent or duplicated code lists, scaling governance across multiple domains or accelerating AI or analytics initiatives, Amplifi can help. [Contact our team](#) for an initial consultation.

Faster time to value

Pre-built components enable a short, focused implementation

Proven in delivery

Developed and validated across real client engagements

Scalable approach

A consistent model that supports multiple domains without redesign

Reduced risk

Avoids bespoke engineering and fragmented solutions

Trusted reference data foundation

Consistent, governed data across systems and teams

Accelerated transformation

Deliver value quickly without long delivery cycles

Improved data quality and control

Standardised processes reduce errors and duplication

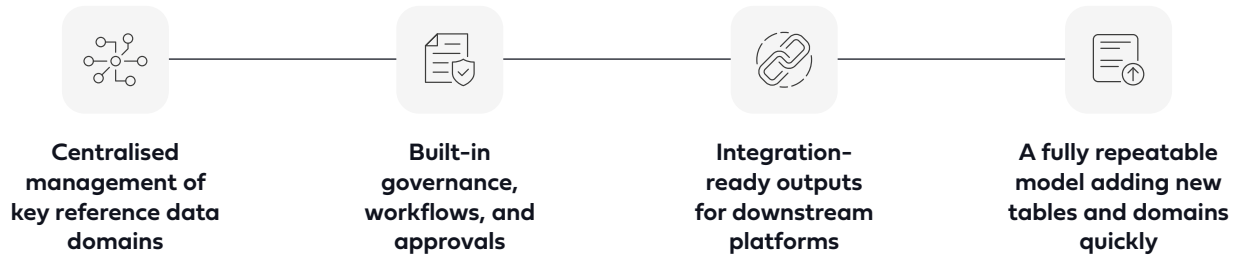

Stronger analytics and AI readiness

Reliable reference data underpinning insight and decision-making

What does Amplifi deliver?

Amplifi combines deep Stibo Systems expertise with real-world delivery experience, bringing a practical, outcome-led approach to data foundations. We'll start with a focused engagement to assess suitability before delivering a framework for managing and distributing reference data at scale.

Key features

Governance-by-design

Controlled creation, change, approval, and publication of reference data with a clear ownership and stewardship model.

Enterprise integration ready

Authentication via Azure Active Directory with distribution to downstream platforms such as Snowflake, Databricks, or other consuming systems.

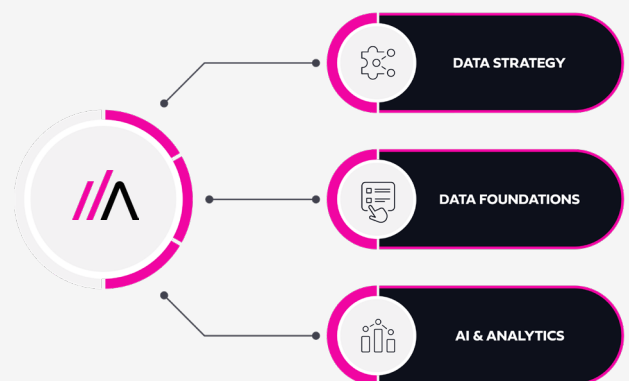

The accelerator offers rapid deployment to typical use cases. These can then be built and expanded on over time.

Why choose Amplifi?

Amplifi is your trusted data and AI partner helping businesses maximise the full potential of their data.

Whether you are starting with a secure data foundation, scaling your analytics and AI practice, or implementing an innovative strategy, we partner with you to ensure that results are amplified across your organisation.

Our deep expertise in data strategy, data foundations, and AI and analytics makes us a true partner at any stage of your data journey.
